PROBLEM 14—open problem exploration - continued

Look at the comments for your PROBLEM 9 (open problem exploration) on gradescope. Try to address those comments. Expand on your write-up (for most of you—do add references/citations to your problem). Of course the expectation is **not** that you will solve the problem or that you will have a viable idea—the expectation is that you will understand the problem, what progress has been made, what special case might be interesting, etc.
